

PP-3000 & 1800 ATTACHMENTS

“POSTPULLER”

PATENT PENDING

A fast and **SAFE**
way to remove
unwanted posts

THE PP-3000 POSTPULLER

THE 1800 MINI POSTPULLER

There are countless stories of contractors, operators, and field technicians having to pull out post and ended up using a choker chain that broke on them. The amount of energy released in that breakage should cause on site supervisor, manager or client to take a serious look at the practice of using chains. One such incident at a state DOT launched the effort to eliminate such risks.

The patent pending PP-3000 has been designed to capture post sizes from 2” to 8”, round or square, wood or steel. Attached to any skid steer with a standard quick attach plate, the combination of lift and vibration makes short work of pulling posts. From the removal of guard rail posts, signage, let the PP-3000 make quick and **SAFE** work of your next project.
